

Instructions for preparing templates

01 Preparation

The templates are best done of thicker (180-200 μm), non-stretchy foil. If you don't have suitable foil, you can order such foil in our company.

Spread the foil on the surface of the element, making sure that it sticks flat to the surface.

Protect the foil against shifting, e.g. by sticking paper tape in several places.

02 Drawing and description of elements

Use a thin (preferably 0.4mm / Size S), dark and indelible marker for the outline.

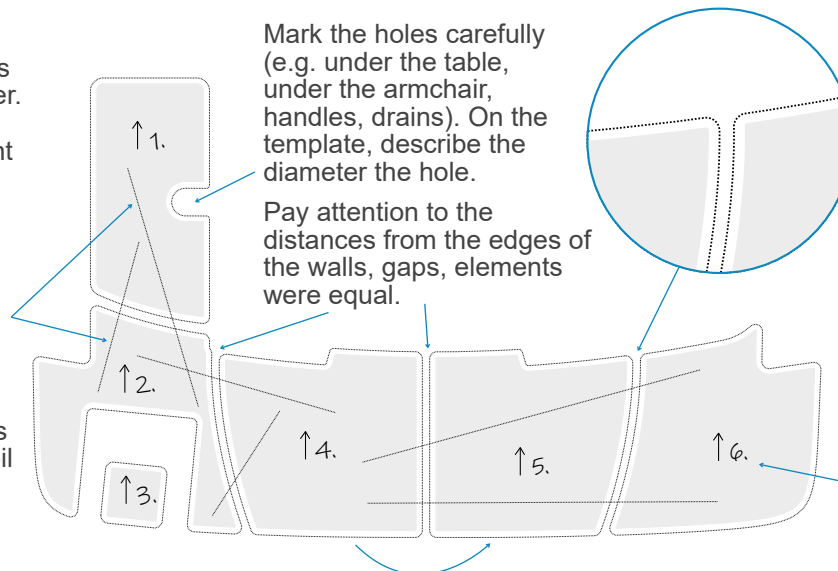

Try to draw a single, precise line, on the edge of the anti-slip surface.

Do not cut the elements along the outlined line

Take care of positioning elements relative to each other. It is important because subsequent drawing patterns or formwork.

Draw two, long and straight lines under different angles, passing through adjacent elements.

Try to post elements on one a piece of foil or draw an edge adjacent item.

Mark the holes carefully (e.g. under the table, under the armchair, handles, drains). On the template, describe the diameter the hole.

Pay attention to the distances from the edges of the walls, gaps, elements were equal.

Due to the fact that it would be ideal if the foam were glued from a smooth laminate (this increases its adhesion), so please indicate how much on individual panels we can increase it along the perimeter (e.g. 5, 7, 10 mm).

Number the items, write „top” on each template and draw direction line (arrow) from stern to bow.

If possible, make mirror of elements of the same shape. In this case, describe the template on both sides.

03 Take photos

Take photos before taking the templates off.

Take a picture showing the whole boat with all the described elements visible.

If it is impossible to photo all boat, take a few photos "overlapping" each other (it will facilitate the positioning of elements relative to each other).

Additionally, take a photo of each described element. Try to take the photo form the top on the boat to avoid "skewed" (the top frames are the best).

04 Describe the templates

Describe the templates with the boat model and year for eg Cobalt 220 SSE 2019.

Please put a paper with your name, phone number and mail adress.

Take a photo of the nameplate. Describe any additional comments, e.g. color, milling style, whether logo should be milled, etc.

Send templates to:

AQUAVENDO Sp. z o.o., Przemysłowa 4 Street, 05-650 Chynow, Poland
